Zara Sales Data Analysis

Overview

459.573
Total Sales (K)

1.82
Avg Sales (K)

Jackets account for over half of the total and remaining the key driver. Shoes, jackets, and sweaters show relatively stronger average performance. Promotion has only a limited impact, suggesting sales are driven more by product mix than promotional activity.

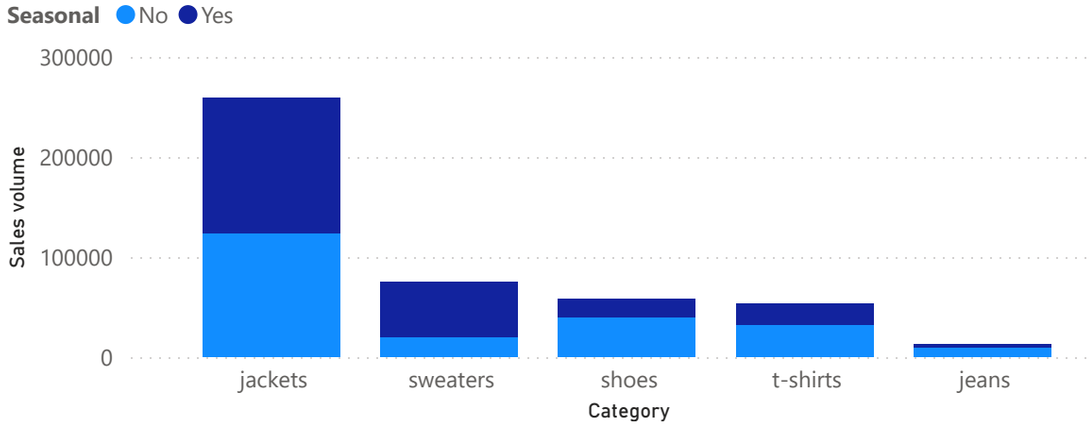
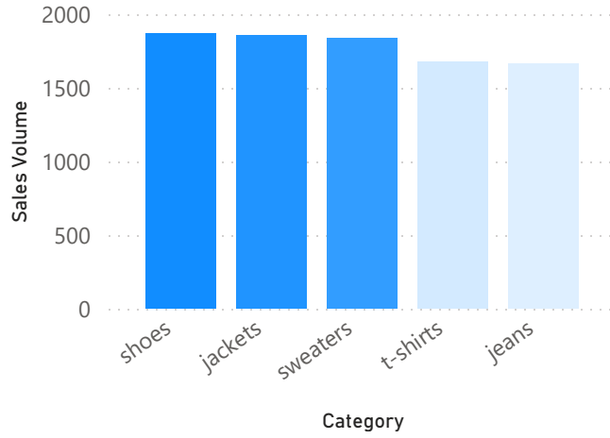
Category & Gender

Sales Volume by Product Category and Seasonality



Average Sales Volume by Category



Total sales are highest for jackets, while sweaters, shoes, and jeans show stronger seasonal variation. In terms of average sales, shoes, jackets, and sweaters perform slightly better, with t-shirts and jeans lagging behind. Overall, category and seasonality are the main factors influencing sales patterns.

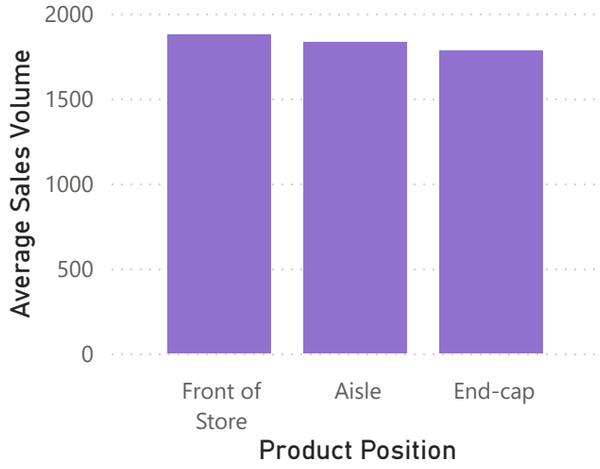
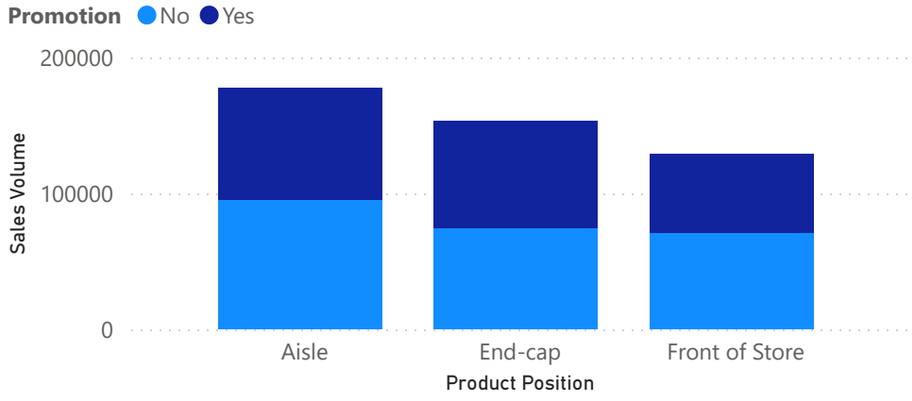
Average Sales Volume by Product Position



Promotion vs Product Position

Product Position	No	Yes
Aisle	1861.51	1792.59
End-cap	1690.32	1870.38
Front of Store	1918.95	1820.19

Sales Volume by Product Position and Promotion Status



Product placement has a modest impact on average sales, with front-of-store items performing slightly better overall. The effect of promotion is mixed: it improves average sales for end-cap displays, but not for aisle or front-of-store placements. Overall, placement appears to matter more than promotion in this view.
